Source Snapshot Manifest — Public Redacted Copy

PUBLIC REDACTED COPY

This document records that a source snapshot was fingerprinted for later deployment comparison. Exact source archive hashes and per-file SHA-256 fingerprints have been withheld from the public copy because they are operational verification data. The original manifest remains in the operator's internal compliance records.

Purpose: provide a reproducible reference for comparing reviewed source with a deployed build. Status: the live deployment has not been independently checked from this record.
